

✓ Insert the hook of the “elbow” foot support into the plastic connector in the middle of the bar at the bottom of the graphic.

✓ Add the vertical extension(s) to complete the back support.

✓ Insert the hook on the top bar of the banner into the groove of the completed back support.

The “Visual Stand” is now complete and ready to position as part of your display.

✓ The top & bottom bars can be left attached to the banner if carefully rolled for storage, ready for rapid set-up on the next occasion.

✓ If the graphic is disconnected from the top and bottom support bars it can be repositioned using the “ziploc” feature:

Start at one end and securely click a few inches/ cms of the plastic profile into place onto the aluminium band. Then work progressively along, either by hand, or using the side of a clean smooth metal object to glide the plastic profile onto the aluminium. Stop every few inches to ensure that this latest section is properly in place and continue.

Plastic studs/rivets: For extra security, we have supplied a set of 4 rivets / studs to help to hold the graphic in place, 2 for the top bar and 2 for the bottom bar.
