

The Visualum “Totem” is a free-standing, double-sided lightbox display. Important: Always ensure that the Totem is standing on a flat, secure surface and that the cord is safely positioned (covered /protected) to avoid danger during passage by members of the public. Read carefully the “Technical Details” supplied with this Totem concerning conditions of usage.

Installation:

Carefully remove the base section from it’s packaging (please note the arrangement of the internal protections supplied, for ease of re-packing). Place this base section in it’s required position as part of your display / exhibition.

Remove the top section from it’s packaging. Fit the top section to the base by guiding the two connection rods into the slots provided. Important: only one of the connection rods is equipped with electrical fittings and this should be positioned on the same side as the entry of the electrical cable into the base.

You can now plug in your “Totem” display.

The side profiles of the “Totem” can be opened and closed by hand, just like any standard “click” frame. Position each graphic under the protective anti-reflection sheet (Total of 4 graphics for the 4 “ windows” of the “Totem”.

Storey Totem: Follow a similar procedure for the assembly of Figra’s 3-storey version. (We advise to insert the graphics in the top section before assembly!)
